

Ex 10.2 Sentiment Analysis

1. Sentiment Analysis of National Day Rally (NDR) Speeches. Dataset: NDR folder contain text files of yearly speeches. The lexicon dictionary in Quanteda Rpackage is recommended to be used as the dictionary for sentiments as it includes negated words.
 - a. Conduct Sentiment Analysis on the speeches and show how the sentiments has changed over the years. [More than one way to show measure sentiments.]
 - b. Create a wordcloud of frequently used words in the speeches.
 - c. Show a list of the keyword “china” in context across all the speeches.

Instructor solution to be uploaded after class: ndr.R
