

Exercise 2.2

R script: BA1w2 baby2.R

Dataset: baby2.csv

Objectives

- To be comfortable with "error is normal" culture in coding.
- To find ways to understand and then correct errors.
- To learn the habit of setting working directory at the beginning.
- To learn how to import external dataset into R.
- Use the ? operator to get help/documentation on specific R function.

Run BA1w2 baby2.R

1. Where are the errors? Correct the errors.
2. Is there a better and faster way to get summary statistics of all the variables in the dataset, instead of one variable at a time?

Coordinator's solution to all exercises will be posted on main site after all classes complete lessons at end of week.
